FIRST PRESENTATION OF MULTIPLE DEPENDENT CLAIM			<input type="checkbox"/>

• *Chlorophyll a* (Chl *a*) is the primary photosynthetic pigment in all photosynthetic organisms. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl *a* is found in the thylakoid membranes of chloroplasts in plants and algae, and in the plasma membrane of cyanobacteria. It plays a central role in the light reactions of photosynthesis, where it captures light energy and transfers it to the reaction center, leading to the photolysis of water and the reduction of NADP⁺ to NADPH.

*** $p < 0.001$, ** $p < 0.01$, * $p < 0.05$, NS = not significant.

*** $p < 0.001$ compared to control.
